

Please see below for a note regarding a methodological update for analyzing population at

Instructions for Completing the Socioeconomic Assessr

- 1: Locate the Federal Information Processing System (FIPS) Code for the addresses in It's important to make sure the "ACS2022_Current" option is selected in the Vintage
Link: <https://geocoding.geo.census.gov/geocoder/geographies/address?form>

Census Geocoder Find Locations Find Geographies Detailed Information and FAQs Cor

Find Address Geographies

House number and Street name:

City:

Vintage:
ACS2022_Current

Get Results

The Census Geocoder can also identify the tracts of several addresses at a time via then Batch Address Processing, and upload the address file. The system is limited to include a helpful sample CSV file at the bottom to ensure correct formatting. Again, n option in the Vintage dropdown.

[Get Results](#)

2: From the bottom of the results page to the "Census Tracts" section and

Census Tracts:

STATE CODE: 19

CENTLON: -093.6351631

GEOID: 19153004100

CENTLAT: +41.5615755

COUNTY CODE: 153

TRACT CODE: 004100

AREAWATER: 494273

AREALAND: 4292960

NAME: Census Tract 41

This is the FIPS Code that can be used to look up the Socioeconomic Score of the Census Tract. It is broken down by State (first 2 digits), County (next 3 digits), and Tract (final 6 digits). For example:

Census Tract 112.05, Polk County, Iowa

FIPS Code: 19153011205

3: Enter the FIPS Code(s) in the "SRF by Tract (2025)" tab in the light blue boxes. The system allows up to five different FIPS Codes to be assessed at one time. The total Socioeconomic Score will be displayed in the right-most column.

Currently, Census tracts with a total score greater than or equal to 11 are eligible to receive funding subject to funding availability.

A note about measuring population change at the Census

One challenge in measuring the population change in Census tracts over time is the fact that population change after the Decennial Census is completed every 10 years. For this reason, previous Community Assessment (SA) workbooks have used county-level data to measure population change.

Analysis by the University of Tennessee Knoxville recently standardized the tract boundaries for the 2010 and 2020 Census. Their dataset was used in this SA workbook to analyze population change at the tract-level. A detailed write-up of the UTK process can be found at the link below: <https://myutk.maps.arcgis.com/home/item.html?id=92ad327ab4344e38b8bd1e2df6832bac>

Because population changes at the tract level are more sensitive than those at the county level, the "points" differs from the community SA workbook. At the tract level, Census tracts that experienced a population decrease between 2010 and 2020 will receive 2 points. Tracts with population change between 1% and 3% will receive 1 point. Tracts that grew more than 3% do not receive any points.
