

Why You Should Read This: The document below reviews the environmental impact likely from a State Revolving Fund project. As part of the environmental review, you are entitled to provide comments. If you have concerns about the environmental impact of this project, raise them now. We encourage public input in this decision-making process.

IOWA STATE REVOLVING FUND
REAFFIRMATION OF A FINDING OF NO SIGNIFICANT IMPACT

March 2, 2026

To: All Interested Citizens, Government Agencies, and Public Groups

An environmental review has been performed based on the procedures for implementing the National Environmental Policy Act (NEPA), for the proposed agency action below:

Applicant: City of Eagle Grove

SRF Number: CS1921089 01

County: Wright

Iowa DNR Project Number: S2022-0384A

State: Iowa

Potential Other Funding Sources: CDBG

The purpose of this letter is to provide you with a State Revolving Fund (SRF) status update. This project has previously been reviewed by the DNR and a Finding of No Significant Impact (FNSI) was issued on August 19, 2025 and subsequently finalized on September 19, 2025. This project will not be receiving federal funds through SRF.

An additional project area outside the original environmental review requires work for the proposed project. The additional work includes extending the proposed force main south from the originally proposed discharge manhole location on Commercial Avenue, to a discharge location in the southern portion of the collection system, and closer to the Wastewater Treatment Facility. The scope also adds that the lift station pumps and force main sizing will consider the existing and projected flows. The original proposed project, which already cleared environmental review includes replacing the Highway 17 lift station with a new submersible lift station and various collection system improvements. This work includes demolishing the existing lift station, installing the new lift station structure, pumps, electrical and controls, valves, piping, and backup generator, plus all necessary connections and appurtenances. The original scope also includes a force main from the lift station to a discharge manhole on Commercial Avenue. Collection system improvements to address inflow and infiltration include cleaning and televising, lateral repairs, grouting, chimney seals, lining or replacing areas of existing collection system piping, replacing or lining existing manholes, and raising the rim elevation of manholes where necessary. DNR has determined that the additional scope/location will result in no significant environmental impact as outlined in 40 CFR Part 6.

The FNSI is hereby Reaffirmed including the revised scope and additional project area for the new force main. This action is taken on the basis of a careful review of the engineering report, the environmental assessment, and other supporting data which are on file at the Department of Natural Resources' office in Des Moines, Iowa. These are available for public review upon request. This Department will not take any administrative

action on the project for at least thirty (30) calendar days from the above date. Persons disagreeing with the above environmental decision may submit comments to the department during this period. Your comments can be sent to SRF-PC@dnr.iowa.gov or directly to me at Rebecca.FlynnKettman@dnr.iowa.gov or (515) 204-5672.

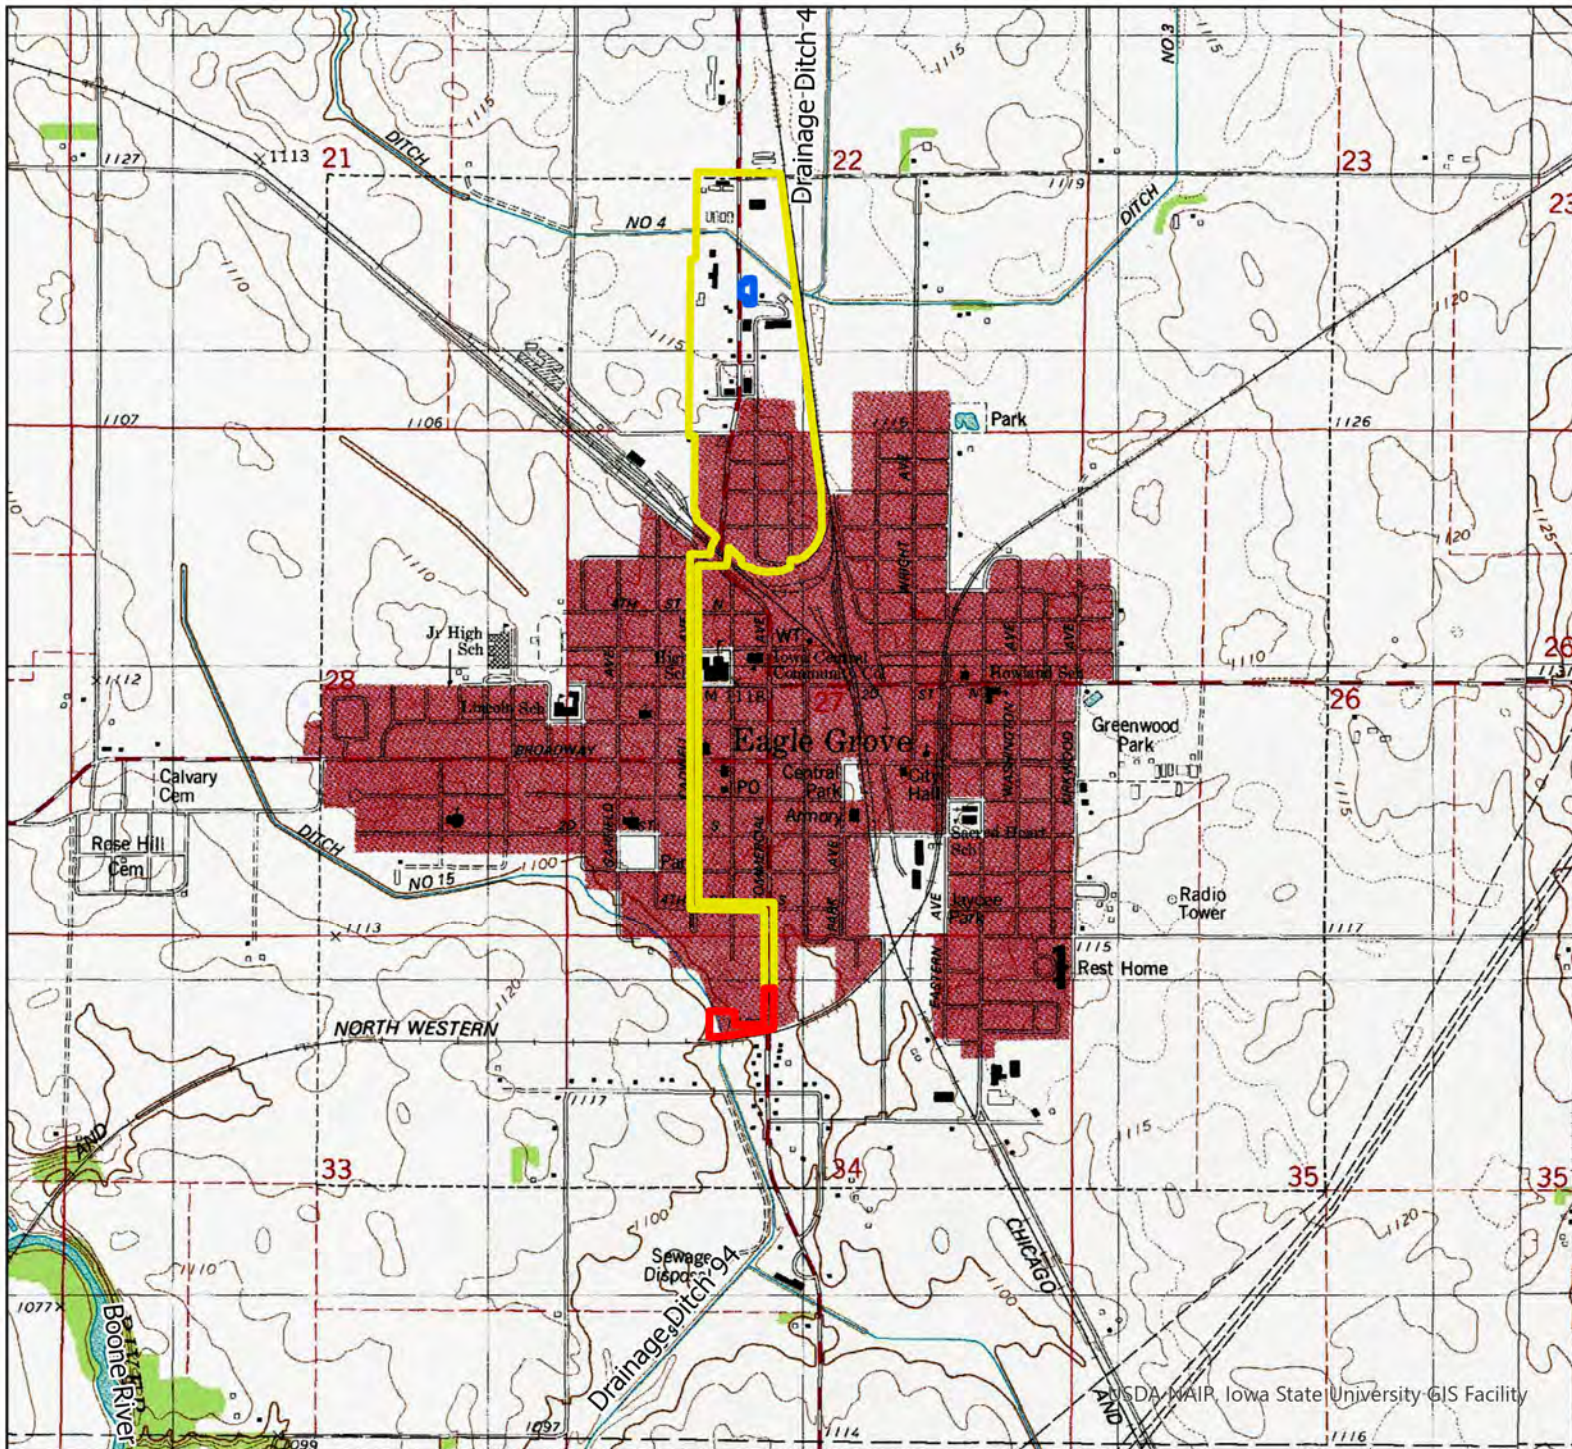

Sincerely,

Rebecca Flynn Kettman
